# "Advanced Physical Metallurgy"

- Bulk Metallic Glasses -

Spring 2016\_445.655A

**Professor Eun Soo Park** 

#### Syllabus

Location: **33-327** 

Meeting time: M & W 09:30-10:45

Class web page: <a href="http://eng.snu.ac.kr/lecture/index.php">http://eng.snu.ac.kr/lecture/index.php</a>

### Teaching staff

Instructor: Eun Soo Park

Office: **33-313** 

Telephone: **02-880-7221**Email: <a href="mailto:espark@snu.ac.kr">espark@snu.ac.kr</a>
Office hours: **by appointment**

Additional reading materials will be provided.

# Course Description:

This course will cover the rapidly evolving field of amorphous materials, with a particular emphasis on the connection among thermodynamic, kinetic, and structural aspects of amorphous materials. This course intends to illustrate the major materials issues for amorphous metals, from processing to properties and from the fundamental science of glasses to viable industrial applications. I hope that this course shows why amorphous materials are attracting such an intensive interest and serve to highlight some challenging issues awaiting resolution. After completing this course, students performing experimental research using amorphous materials should be reasonably informed about materials preparation, processing, and stability. Students performing research outside this field should be able to consider amorphous materials as a new form of material suitable for selection in their innovations.

#### Schedule

week 1	Introduction to Amorphous materials
week 2	Classification of Solids
week 3	Definition of Amorphous Materials
week 4	Preparation of Amorphous Materials
week 5	Phase Transition: glass transition
week 6	Measurement of Glass Transition Temperature
week 7	Theories for the Glass Transition I: thermodynamic / entropy
week 8	Theories for the Glass Transition II: relaxation behavior / viscosity
week 9	Structural Approach to Glass Formation
week 10	Kinetic Approach to Glass Formation
week 11	Ease of Glass Transition: glass-forming ability
week 12	Glass Forming Ability Parameters
week 13	Formation of Bulk Metallic Glasses
week 14	Mechanical Properties of Bulk Metallic Glasses and Their Composites
week 15	Unique Properties of Bulk Metallic Glasses
week 16	Potential Applications of Bulk Metallic Glasses

# Components of Your Grade:

### 1) Exams (midterm: 35% + final: 40%)

There will be two exams, each of which takes place in class for 3 hours. The exams will be conceptual and simple.

#### 2) Reports and Presentation (15%) (+Incentive Homework 5%)

There will be one presentation on the topics of amorphous materials in the last part of course, which takes place in class for half an hour. The presentation will include mainly topics of amorphous materials from the fundamental science to viable industrial applications.

#### 3) Attendance (10%)

Please don't be late to class.

Remarks: The grade components might change up to 5% depending on the student's achievement.

#### Course Policies, Questions and Answers

#### Q: Is it possible to adjust class time?

A: None is planned, but if you really want one, speak up. We can negotiate.

#### Q: What is the course style?

**A:** Although most classes will be lecture-based, I am hoping that the weekly class meetings will proceed in a discussion format, so please do ask questions.

## Q: What is the policy for attendance?

**A:** Please be on time. Being late disrupts the instructor and other students. If you cannot attend a class, please let me know in advance by email.
