

# Strategies for Pre-training Graph Neural Networks

Jaewoong Shim

Seoul National University

Hu, Weihua, et al. "Strategies for Pre-training Graph Neural Networks." *International Conference on Learning Representations*. 2020.

# Pre-training GNN ?

## problem

- Scarcity of labeled data
- Out-of-distribution prediction

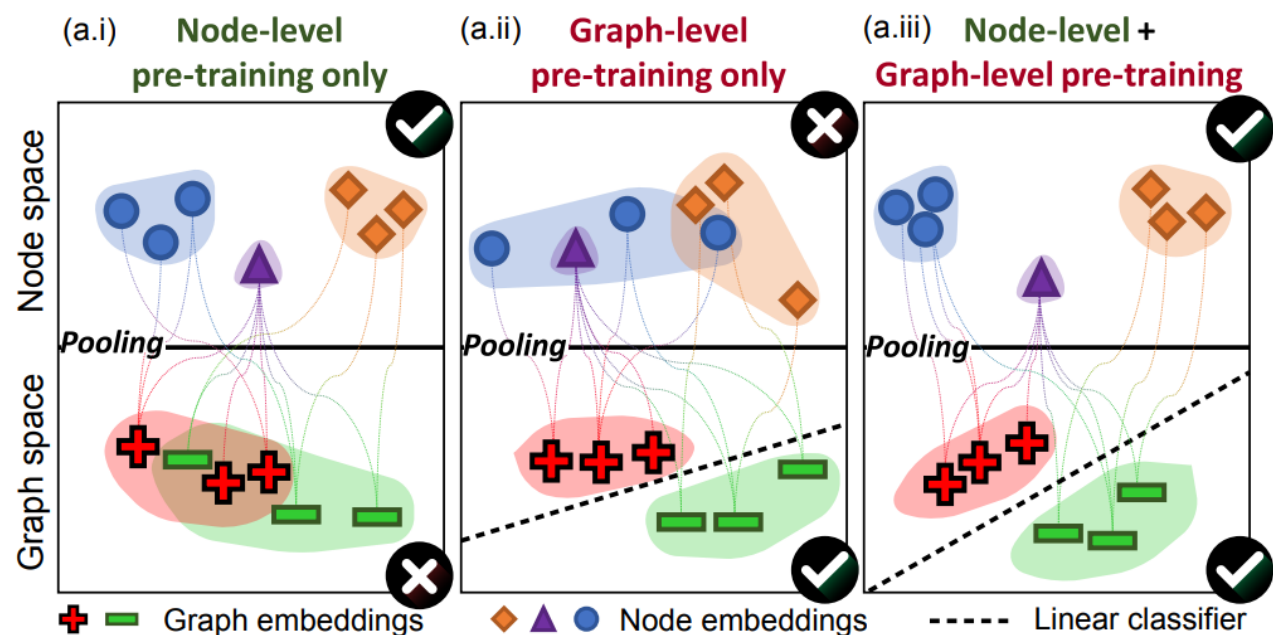

## solution

Pre-training a model on related tasks where data is abundant

- How to pre-train GNNs ?

# Proposed strategies for pre-training GNN

- Pre-train both node and graph embeddings

# Proposed strategies for pre-training GNN

(b) Categorization of our pre-training methods

	Node-level	Graph-level
Attribute prediction	Attribute Masking	Supervised Attribute Prediction
Structure prediction	Context Prediction	Structural Similarity Prediction

# Context Prediction

	Node-level	Graph-level
Attribute prediction	Attribute Masking	Supervised Attribute Prediction
Structure prediction	Context Prediction	Structural Similarity Prediction

- 비슷한 structural context를 가진 node들은 비슷한 embedding을 갖도록
  - 2개의 GNN을 통해 학습을 수행

# Context Prediction

	Node-level	Graph-level
Attribute prediction	Attribute Masking	Supervised Attribute Prediction
Structure prediction	Context Prediction	Structural Similarity Prediction

1. Main GNN (pre-trained model로 쓰임)
  - K-layer GNN을 통해 K-hop neighbor의 정보를 aggregate

# Context Prediction

	Node-level	Graph-level
Attribute prediction	Attribute Masking	Supervised Attribute Prediction
Structure prediction	Context Prediction	Structural Similarity Prediction

## 2. Context GNN (auxiliary GNN)

- Context graph of node  $v$  :  $r_1$ -hop과  $r_2$ -hop의 사이에 있는 graph들
- Context anchor node : context graph와  $K$ -neighbor의 공통 node
- Context graph  $\xrightarrow{\text{Context GNN}}$  embeddings of context anchor nodes  $\longrightarrow$  average

# Context Prediction

	Node-level	Graph-level
Attribute prediction	Attribute Masking	Supervised Attribute Prediction
Structure prediction	Context Prediction	Structural Similarity Prediction

## 3. Learning via negative sampling

- Jointly learn the main GNN and context GNN

Learning objective :  $\sigma \left( h_v^{(K)\top} c_{v'}^{G'} \right) \approx \mathbf{1}\{v \text{ and } v' \text{ are the same nodes}\}$

# Attribute Masking

	Node-level	Graph-level
Attribute prediction	Attribute Masking	Supervised Attribute Prediction
Structure prediction	Context Prediction	Structural Similarity Prediction

- masked node(edge) attributes are predicted with GNN
  - Useful for richly-annotated graphs from scientific domains
    - Ex) Atom type in molecular graphs

Input graph

(b) Attribute Masking

# Supervised Attribute prediction

	Node-level	Graph-level
Attribute prediction	Attribute Masking	Supervised Attribute Prediction
Structure prediction	Context Prediction	Structural Similarity Prediction

- Graph-level multi-task supervised pre-training
  - Jointly predict a diverse set of supervised labels of individual graphs
    - Ex) predict all the properties of molecules measured so far

# Structural Similarity Prediction

	Node-level	Graph-level
Attribute prediction	Attribute Masking	Supervised Attribute Prediction
Structure prediction	Context Prediction	Structural Similarity Prediction

- Predict the structural similarity of two graphs
    - Ex) graph edit distance, graph structure similarity
  - Ground truth graph distance is difficult to be found
  - Quadratic number of graph pairs in large dataset
- Future work

# Overall Strategy

1. Node-level pre-training on unlabeled data
2. Graph-level pre-training on labeled data
3. Fine-tune on downstream data

# Experiments and Results

	Chemistry			Biology		
	Non-pre-trained	Pre-trained	Gain	Non-pre-trained	Pre-trained	Gain
GIN	67.0	<b>74.2</b>	<b>+7.2</b>	$64.8 \pm 1.0$	<b><math>74.2 \pm 1.5</math></b>	<b>+9.4</b>
GCN	<b>68.9</b>	72.2	+3.4	$63.2 \pm 1.0$	$70.9 \pm 1.7$	+7.7
GraphSAGE	68.3	70.3	+2.0	$65.7 \pm 1.2$	$68.5 \pm 1.5$	+2.8
GAT	66.8	60.3	-6.5	<b><math>68.2 \pm 1.1</math></b>	$67.8 \pm 3.6$	-0.4

Table 2: **Test ROC-AUC (%) performance of different GNN architectures with and without pre-training.** Without pre-training, the less expressive GNNs give slightly better performance than the most expressive GIN because of their smaller model complexity in a low data regime. However, with pre-training, the most expressive GIN is properly regularized and dominates the other architectures. For results split by chemistry datasets, see Table 4 in Appendix H. Pre-training strategy for chemistry data: Context Prediction + Graph-level supervised pre-training; pre-training strategy for biology data: Attribute Masking + Graph-level supervised pre-training.

# Experiments and Results

Figure 4: **Training and validation curves of different pre-training strategies on GINs.** Solid and dashed lines indicate training and validation curves, respectively.

# Conclusions

- Systematic study of pre-training GNNs
- Develop a novel strategy for pre-training GNNs
- Consider both node-level and graph-level pre-training with an expressive GNN.

# Reproducing

코드가 공개된 논문입니다.

<https://github.com/snap-stanford/pretrain-gnns>

# 코드 실행 구조

## 1. Self-supervised pre-training

- Pretrain\_masking.py
- Pretrain\_contextpred.py
- Pretrain\_edgepred.py
- Pretrain\_deepgraphinfomax.py

## 2. Supervised pre-training

- Pretrain\_supervised.py

## 3. Fine-tuning

- Finetune.py

# 코드 실행 예시

- Pretraining 방법
  - Context prediction + supervised pretraining
- 데이터셋 : BACE 데이터 셋
  - **BACE**. Qualitative binding results for a set of inhibitors of human  $\beta$ -secretase 1 (Subramanian et al., 2016).
- Finetuning 시행
