Total 100 points. Write your answers in the space provided. If you need more space, write on the back.

1. [ $5 \times 2 \mathrm{pts}$ Give the systematic name for each of the following compounds.
(a) $\sim \sim M g r$
(b)

(c)

(d)

(e)

2. [10 pts] Of the following 2-step synthesis, the first step is the reaction utilizing organometallic compounds, and the second step is a radical reaction. Answer the following questions.

(a) [2 pts] What should be the compound $\mathbf{A}$ ? No need to explain; just draw the structure.
(b) [3 x 2 pts] There can be three [3] methods for the first step. Show the reagents needed for each method.
(1)
(2)
(3)
(c) [2 pts] Show the reagents needed for the second step, the radical reaction.
3. [25 points] When the compound $A$ on the right is heated in methanol $\left[\mathrm{CH}_{3} \mathrm{OH}\right.$ ], the compound $B$ is formed: Reaction 1 . When the compound $A$ is heated in methanol in the presence of a catalytic amount of HCl , the compound C is formed: Reaction 2 . Answer the following questions.

A
(a) [3 pts] Give the name of the compound $\mathbf{A}, \mathbf{B}$, and $\mathbf{C}$.

A $\qquad$
B $\qquad$
C $\qquad$
(b) [4 pts] Show the structure of the compound B and C.
compound B
compound $\mathbf{C}$
(c) [4 pts] What is the name or nature of the reaction 1 and 2 , respectively?

1 $\qquad$

2 $\qquad$
(d) [4 pts] Explain why different products are formed in the two reactions.
(e) [3 pts] Would the MS spectra of the compound $\mathbf{B}$ and $\mathbf{C}$ be markedly distinguishable? Explain your answer, either yes or no.
(f) [3 pts] How would you discern the IR spectra of the compound $\mathbf{B}$ and $\mathbf{C}$ ?
(g) [4 pts] How would the NMR spectrum of the compound $\mathbf{B}$ is different from that of $\mathbf{C}$ ? Discuss in terms of number, position, and splitting of the signals.

## 4. [16 pts] Answer the following questions.

(a) [4 pts] Show the synthetic steps for the preparation of benzylamine through Gabriel synthesis.

(b) [3 pts] Show why this method is advantageous over the direct substitution of benzyl halide with ammonia.
(c) [3 pts] Show the synthetic steps for the preparation of the compound on the right from benzylamine and a carbonyl compound.

(d) [6 pts] Show the mechanism for the reaction of the product of (c) above and acetone.

5. [15 points] For the reduction of the $\beta$-keto ester on the right, answer the following questions.
(a) [2 + 3 pts] If you want to reduce both of the carbonyl groups what reagent would you use? What would be the product in that case?
 reducing agent $\qquad$ structure of product
(b) [2 pts] If you want to reduce only the keto group, what reagent would you use?
(c) [8 pts] If you want to reduce only the ester group, you have to convert the keto group to a protecting group like cyclic acetal group. Using 1,2-ethanediol
 $\left[\mathrm{HOCH}_{2} \mathrm{CH}_{2} \mathrm{OH}\right]$ as the reagent and HCl as the catalyst, show the detailed mechanism for the protection reaction. (Hint: There needs 7 steps.)
6. [4 x 3 pts] Draw the structure of $A-D$. No need to explain.

A

B

C

D

7. [12 pts] For the reaction of an $\alpha, \beta$-unsaturated ketone below, answer the following questions.

(a) [4 pts] Draw the structure of the kinetic and thermodynamic products.
kinetic product thermodynamic product
(b) [4 pts] Explain your answer to (a); why one is the kinetic and the other the thermodynamic product. You may discuss the transition states and the intermediates.
(c) [4 pts] If you find that the two products are formed in the same amount (50/50), how would you explain the result?

Table 13.4 Frequencies of Important IR Stretching Vibrations

| Type of bond | Wavenumber ( $\left.\mathbf{c m}^{\mathbf{- 1}}\right)$ | Intensity |
| :---: | :---: | :---: |
| $\mathrm{C} \equiv \mathrm{N}$ | $2260-2220$ | medium |
| $\mathrm{C} \equiv \mathrm{C}$ | $2260-2100$ | medium to weak |
| $\mathrm{C}=\mathrm{C}$ | $1680-1600$ | medium |
| $\mathrm{C}=\mathrm{N}$ | $1650-1550$ | medium |
|  | $\sim 1600$ and $\sim 1500-1430$ | strong to weak |
| $\mathrm{C}=\mathrm{O}$ | $1780-1650$ | strong |
| $\mathrm{C}-\mathrm{O}$ |  |  |
| $\mathrm{C}-\mathrm{N}$ |  |  | | $\mathrm{O}-\mathrm{H}$ |
| :---: |
| (alcohol) |
| $\mathrm{O}-\mathrm{H}$ |
| (carboxylic acid) |

Table 14.1 Approximate Values of Chemical Shifts (ppm) for ${ }^{1} \mathrm{H}$ NMR*

| Type of proton | ppm | Type of proton | ppm | Type of proton | ppm | Type of proton | ppm |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $-\mathrm{CH}_{3}$ | 0.85 |  | 2.3 |  | $2.5-4$ | $\mathrm{R}-\mathrm{OH}$ | Variable, 2-5 |
| $-\mathrm{CH}_{2}$ - | 1.20 | $-\mathrm{C} \equiv \mathrm{C}-\mathrm{H}$ | 2.4 |  | 2.5-4 |  | Variable, 4-7 |
| $\stackrel{\mid}{-\mathrm{CH}}-$ | 1.55 | $\mathrm{R}-\mathrm{O}-\mathrm{CH}_{3}$ | 3.3 |  | 3-4 |  | 6.5-8 |
|  | 1.7 |  | 4.7 |  | 4-4.5 |  | 9.0-10 |
|  | 2.1 |  | 5.3 | $\mathrm{R}-\mathrm{NH}_{2}$ | Variable, $1.5-4$ |  | Variable, 10-12 |
|  |  |  |  |  |  |  | Variable, 5-8 |
