# 7. Block theory for underground chambers 

## 1) Introduction

- Economical underground chamber design
- Arrangement for the chambers requiring only minimal artificial support
- Optimum choices for the orientation, shapes and arrangement of openings to minimize the danger of block movement
- Underground chambers consist of
- Large, essentially prismatic rooms, branches, pillars, entries \& intersections
- Elements of the openings are planes, edges, corners and cylinders.
- This chapter shows
- How to determine the key blocks formed by intersections or union of plana excavation surfaces

## 2) Key blocks in the roof, floor, and walls

(a)

(b)

Roof and floor

## 3) Blocks that are removable in two planes simultaneously: concave edges

## 3) Blocks that are removable in two planes simultameously: coneave edges

Wall/roof edges

## 3) Blocks that are removable in two planes simultaneously: concave edges

# 4) Blocks that are removable in three planes simultaneously: concave corners 

Wall/wall/roof corner

## 4) Blocks that are removable in three planes simultaneously: concave corners

Wall/wall/floor corners

## 5) Example: Key blocks analysis for an underground chamber

Key blocks of the roof
(Orientations of planes and joints : refer to Table 7.1

## 5) Example: Key blocks analysis for an underground <br> chamber

Key blocks of wall 3

## 5) Example: Key blocks analysis for an underground chamber

Key blocks of wall 4

## 5) Example: Key blocks analysis for an underground <br> chamber

JPs with one repeated joint set

## 5) Example: Key blocks analysis for an underground

 chamber

Key block of edge $\mathbf{E}_{23}$

TABLE 7.3 Summary of Removable Blocks for the Example Considering Roof, Floor, Walls, Concave Edges, and Concave/Concave Corners

| Position | Removable Blocks with: |  | Reference Figure |
| :---: | :---: | :---: | :---: |
|  | No Repeated Joints | 1 Repeated Joint |  |
| Roof ( $W_{5}$ ) | 1101, 1011 | $\begin{aligned} & 1131,1301,1103,1311, \\ & 1031,3011 \end{aligned}$ | 7.11, 7.14 |
| Floor ( $W_{6}$ ) | 0010, 0100 | $\begin{aligned} & 3100,0300,0310,0130 \\ & 0030,0013 \end{aligned}$ | 7.11, 7.14 |
| Wall $1\left(W_{1}\right)$ | 0110,0010 | $\begin{aligned} & 3110,0130,0310,0113, \\ & 0030,0013 \end{aligned}$ | 7.12, 7.14 |
| Wall $2\left(W_{2}\right)$ | 1101, 1100, 1110 | $\begin{aligned} & 1103,1300,3100,1130 \\ & 1301,1131,3110,1113 \end{aligned}$ | 7.13, 7.14 |
| Wall $3\left(W_{3}\right)$ | 1001, 1101 | $\begin{aligned} & 1301,1003,3001,1031, \\ & 1131,1103 \end{aligned}$ | 7.12, 7.14 |
| Wall 4 ( $W_{4}$ ) | 0001, 0010, 0011 | $\begin{aligned} & 3001,0031,0003,0030 \\ & 0310,0013,0311,3011 \end{aligned}$ | 7.13, 7.14 |
| Edge $E_{12}$ | None | 3110 | $7.14,7.15$ |
| Edge $E_{23}$ | 1101 | 1131, 1301, 1103 | $7.14,7.15$ |
| Edge $E_{34}$ | None | 3001 | $7.14,7.15$ |
| Edge $E_{14}$ | 0010 | 0013, 0030, 0310 | 7.14, 7.15 |
| Edge $E_{15}$ | None | None | 7.12, 7.14 |
| Edge $E_{25}$ | 1101 | 1131, 1301, 1103 | $7.13,7.14$ |
| Edge $E_{35}$ | 1101 | 1131, 1301, 1103, 1031 | 7.13, 7.14 |
| Edge $E_{4}$ | None | 3011 | $7.13,7.14$ |
| Edge $E_{16}$ | 0010 | 0030,0013, 0310, 0130 | $7.13,7.14$ |
| Edge $E_{26}$ | None | 3100 | $7.13,7.14$ |
| Edge $E_{36}$ | None | None | $7.12,7.14$ |
| Edge $E_{46}$ | 0010 | 0030, 0013, 0310 | $7.13,7.14$ |
| Corner $C_{235}$ | 1101 | 1131, 1301, 1103 | $7.14,7.15$ |
| Corner $C_{146}$ | 0010 | 0030, 0310, 0013 | 7.14, 7.15 |
| All other corners | None | None |  |

Geological trace map of the chamber

## 6) Choice of direction for an underground chamber

The most critical key blocks

1) They belong to the largest free planes.
2) They involve joints of large extent.
3) Their space pyramids contain steep vectors

3 joint sets with $W_{1}$ and

## 6) Choice of direction for an underground chamber

Relationships between key blocks of walls, concave edges and corners

1) If JP belongs to a removable blocks of $\mathrm{E}_{\mathrm{i} j}$, then JP belongs to a removable blocks of $W_{i}$ and $W_{j}$.
2) If JP belongs to a removable blocks of $\mathrm{C}_{\mathrm{ijk}}$, then JP belongs to a removable blocks of $\mathrm{W}_{\mathrm{i}}, \mathrm{W}_{\mathrm{j}}$, and $\mathrm{W}_{\mathrm{k}}$.
3) If JP belongs to a removable blocks of $\mathrm{C}_{\mathrm{ijk}}$, then JP belongs to a removable blocks of edges $\mathrm{E}_{\mathrm{ij}}, \mathrm{E}_{\mathrm{jk}}$, and $\mathrm{E}_{\mathrm{ik}}$.

## 6) Choice of direction for an underground chamber

Linkage diagram for walls, edges, and corners

## 6) Choice of direction for an underground chamber

Procedure for choosing the direction of an underground chamber

1) Draw the great circles of all joint sets in the stereographic projection plane.
2) Draw the line through the intersections of each pair of the great circles.
3) Arbitrarily denote right and left sides of each line standing for right/left walls
4) Determine removable blocks belonging to each line (Table 7.5).
5) Determine removable blocks belonging to the angles bounded by two adjacent lines (Table 7.6).

## 6) Choice of direction for an underground chamber

## 7) Intersections of underground chambers

SP for inside edges of intersecting chambe

## 7) Intersections of underground chambers

SP for wall/wall/roof corners of intersecting chamber

## 7) Intersections of underground chambers

SP for wall/wall/floor corners of intersecting chamber

## 8) Pillars between underground chambers

Key blocks of a wall (rib)

## 8) Pillars between underground chambers

Key blocks of a pillar
