Phone 880-5848, Fax 871-5518

E-mail: mspark@snu.ac.kr

Department of Architecture
College of Engineering
Seoul National University

Lecture Outline

- Chronic Problems in Project Management
- Dynamic Management Approach
- Dynamic Management Concepts
- Course Administration

Have you experienced ...

- Schedule and budget overruns?
- Projects seemingly stuck at “90%” complete?
- New products with flaws discovered after release?
- Late realization of additional time or resource needs?
- Difficulty comparing the performance of different, “unique” projects?

You are not alone ...

The majority of all development projects **fail to meet their time and cost targets, with the overrun** typically between 40 and 200 percent.

Sources:

- Peter Morris and George Hough, *The Anatomy of Major Projects*, Wiley, 1987.
- Dr. Edward B. Roberts, *Strategic Management of Technology: Global Benchmarking*, December 10, 1992 [Results of a survey sponsored by the Massachusetts Institute of Technology, Cambridge, Mass and PA Consulting Group, London, England].

Construction is not an exception. The UK construction industry reports that only 70% of projects delivered within 5% of the tender cost and 38% delivered within 5% of the tender program.

Sources:

- Latham, "Constructing the Team", HMSO, 1994

Why?

- Unrealistic Goals
- Late Changes
- Poor Program Planning and Management
- Resource Shortages
- Lack of Participants' Understanding on Requirements
- Lack of Commitment
- Uncertainties
- And so on...

Chronic Problems in PM

Chronic problems in project management persist in spite of advances in planning and management tools.

- Problems encountered during project management are **fundamentally dynamic**. However, they have been treated **statically with a partial view** on a project.

As a result, schedule tends to be continuously updated during the project duration without value-adding.

Chronic Problems in PM

- Learning has rarely accumulated across projects.
 - Partly due to the structural problems of projects.
 - R&D Projects: unique each time
 - Construction: process-based work that is performed on an unfixed place by a temporary alliance among multiple organizations [Slaughter, 1999].
 - Also, attributed to the lack of learning mechanism in the traditional network-based planning tools such as CPM, PERT, and PDM.

Lecture Outline

- ✓ Chronic Problems in Project Management
 - Dynamic Management Approach
 - Dynamic Management Concepts
 - Course Administration

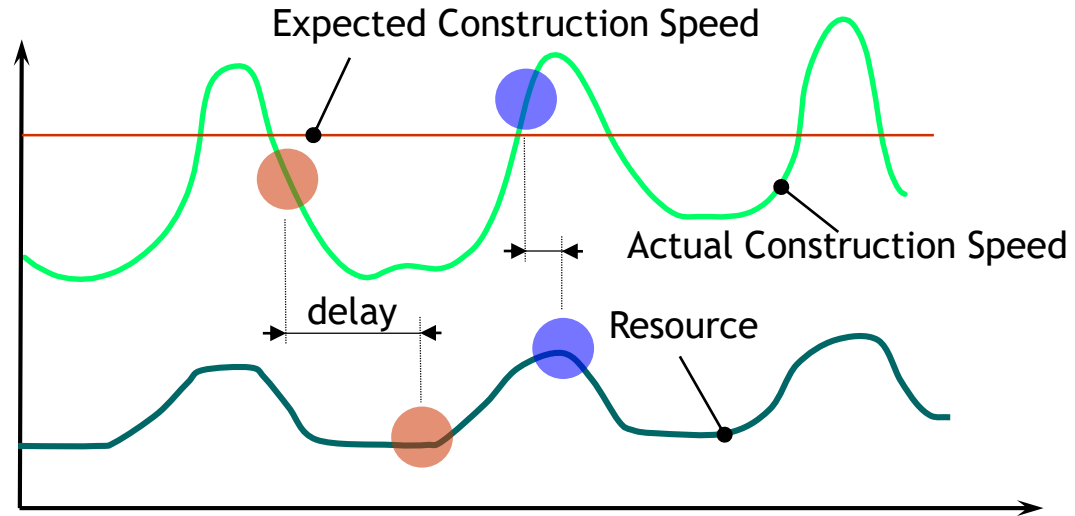

New Approach to PM

Observed Problem

Schedule delay

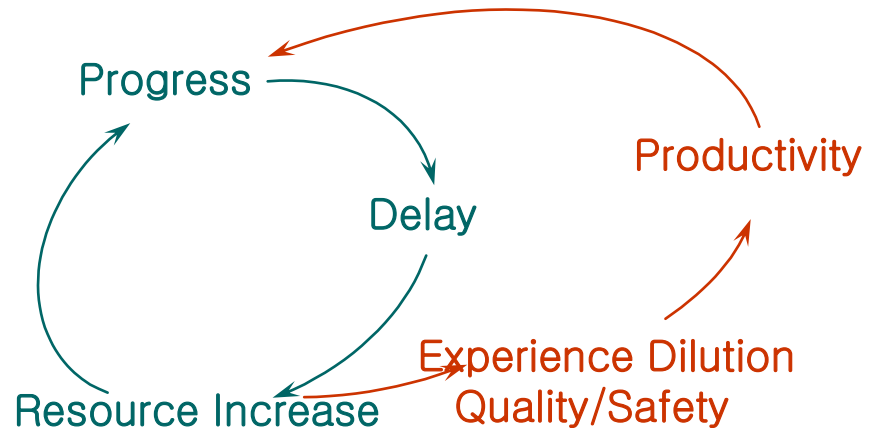

Traditional Approach

Increasing resources

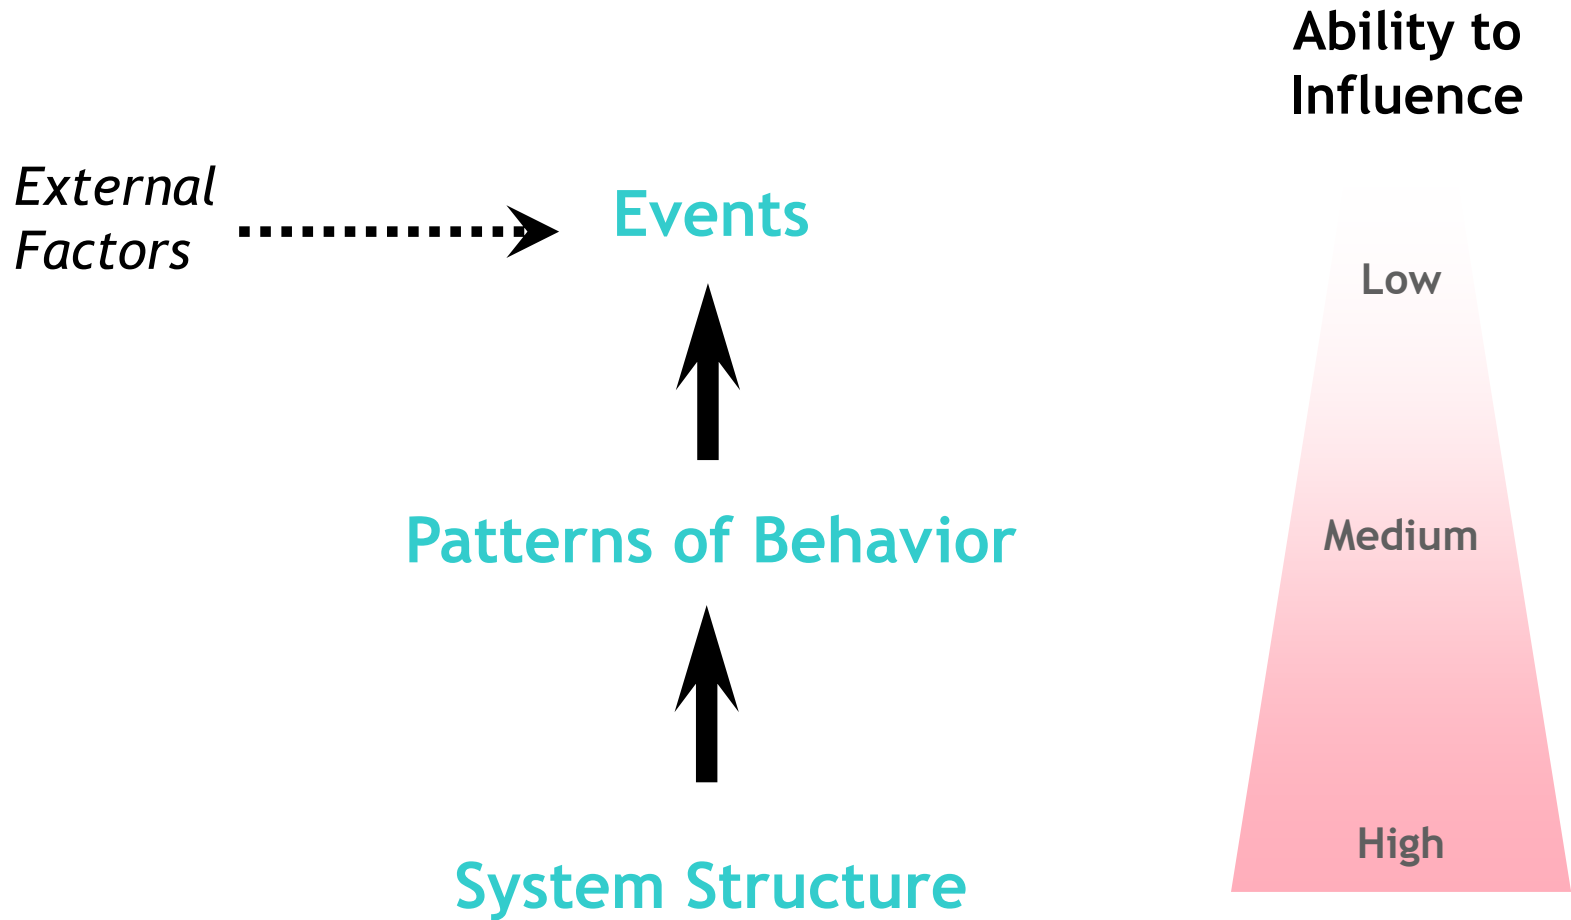

System Approach

Focusing on the system context in which the problem occurred

Their Ability to Influence...

Dynamic Management Approach Helps...

- Understanding the structure of projects, and how that structure creates behaviors
- Designing robust project plans under uncertainty
- Learning across projects

Lecture Outline

- ✓ Chronic Problems in Project Management
- ✓ Dynamic Management Approach
 - Dynamic Management Concepts
 - Course Administration

The premise

The structure of the system (시스템구조) generates its *behavior* (행태), which is observed as a phenomenon (현상).

Image from MS PowerPoint clip art library

System Structure as Cause of Behaviors

The basic element of system structure is the feedback loop.

This one is called a “**positive**,” or “**reinforcing**” feedback loop.

As a result....

Chickens

Time

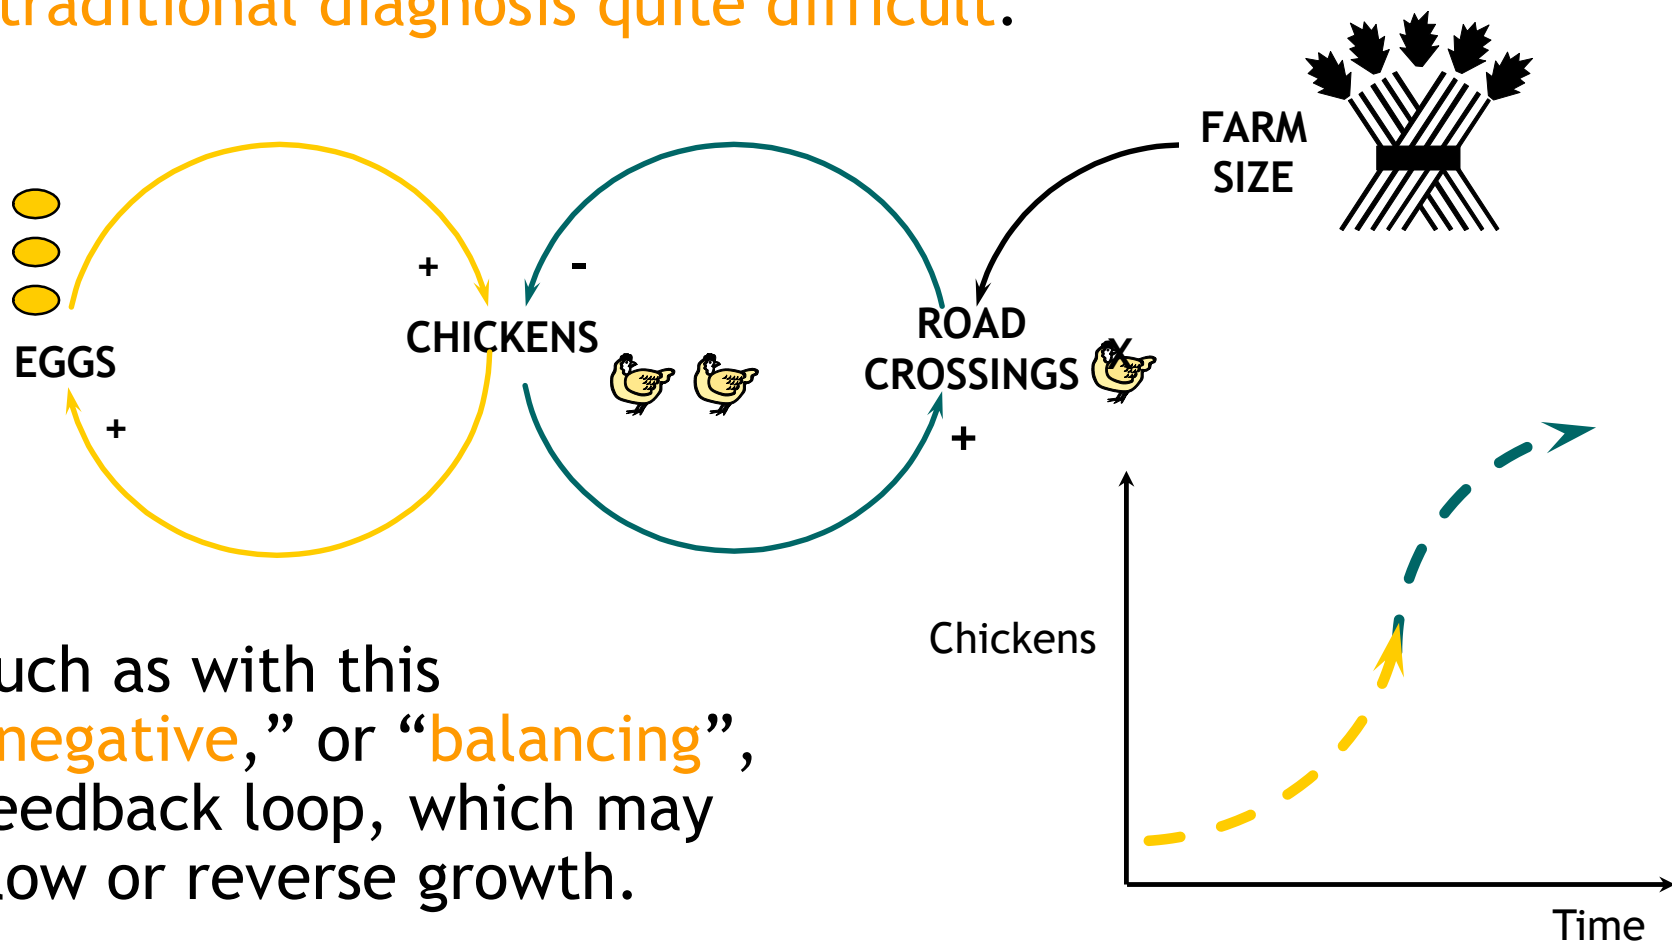

Exodus...

When interacting with one another...

Loop effects interact with one another, making traditional diagnosis quite difficult.

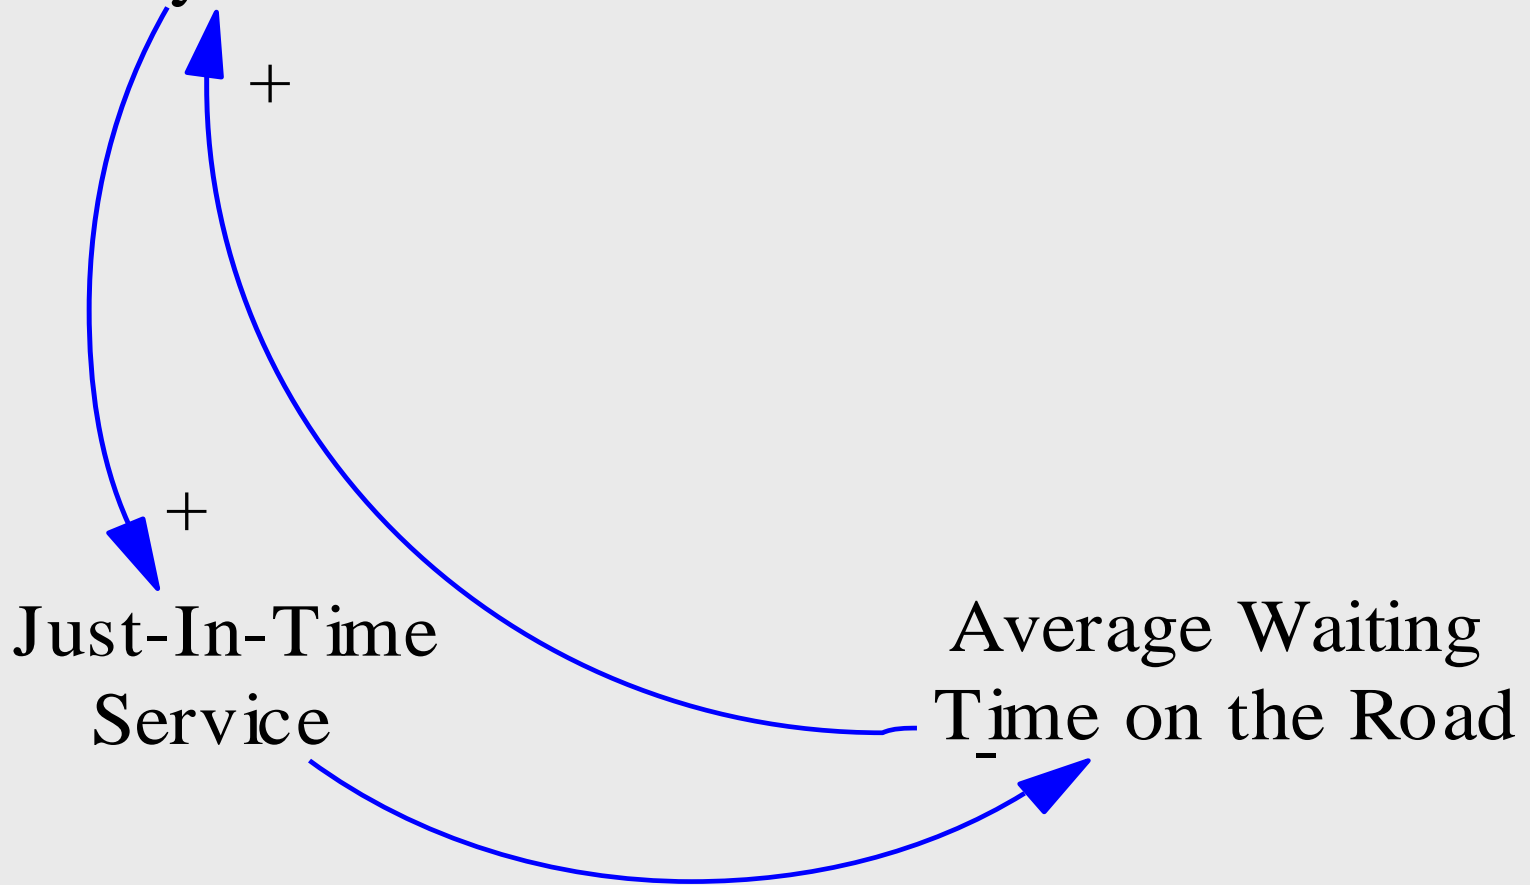

Such as with this “negative,” or “balancing”, feedback loop, which may slow or reverse growth.

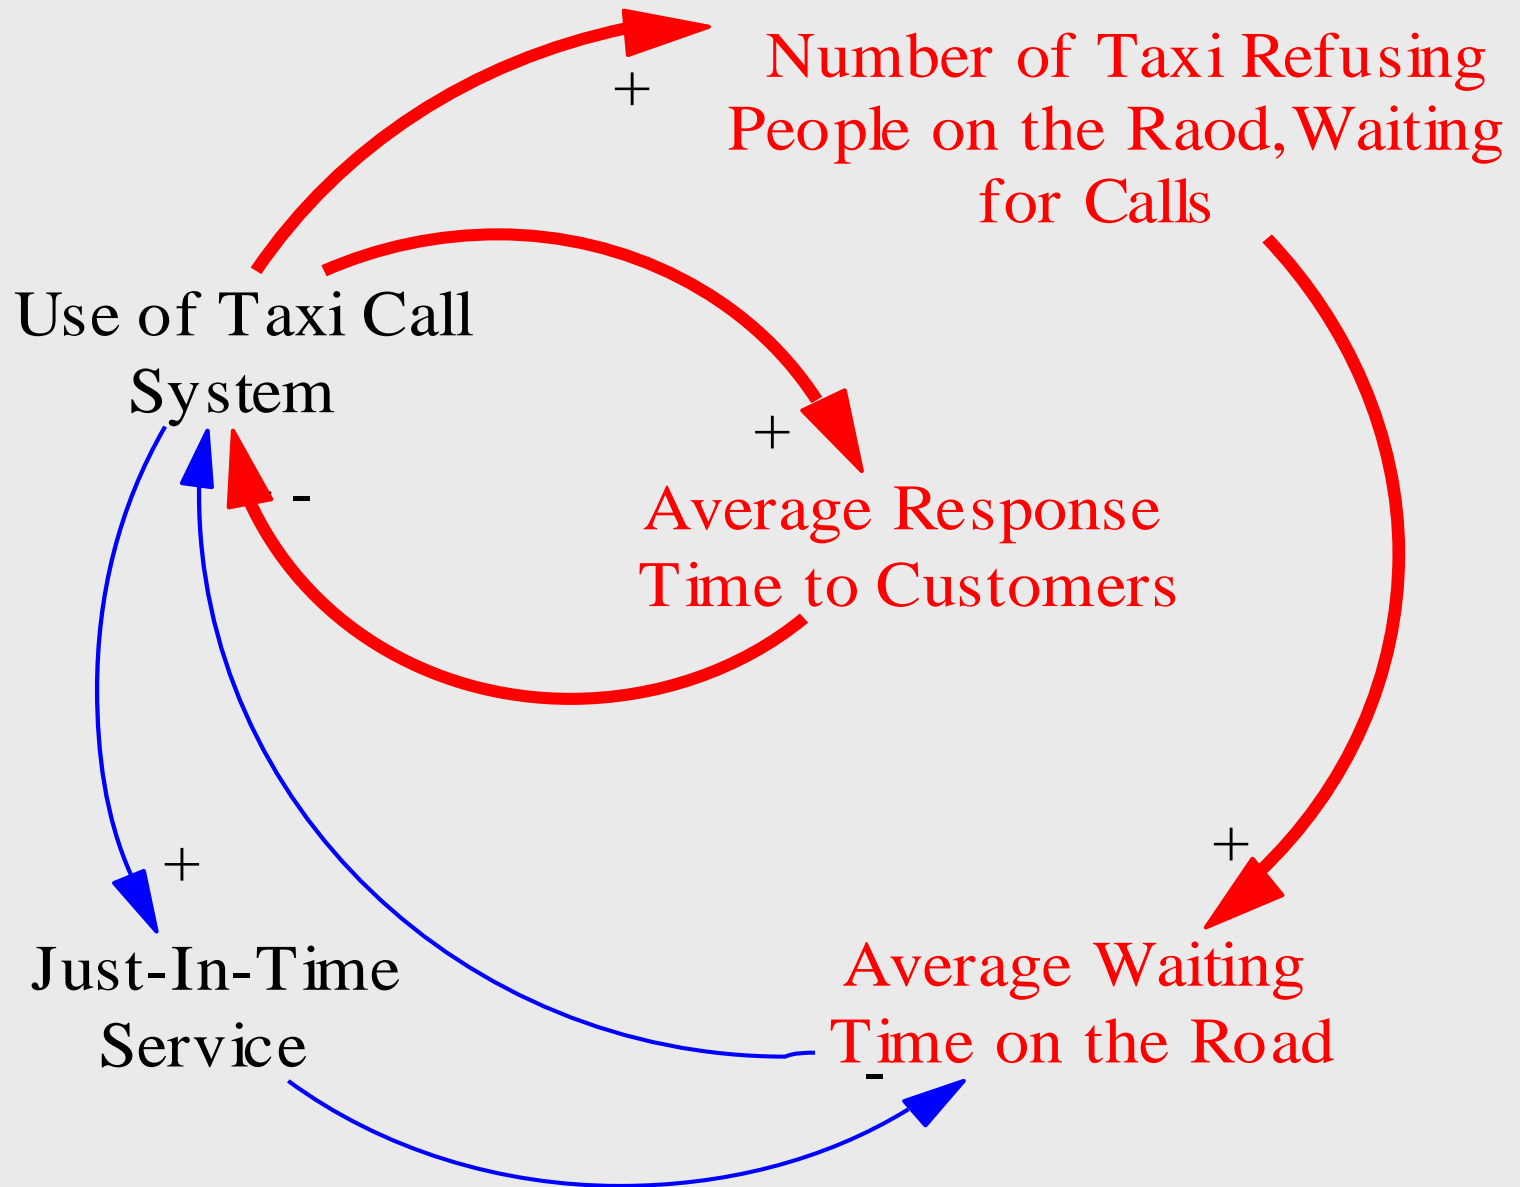

Example

Taxi calling system in Singapore

Use of Taxi Call
System

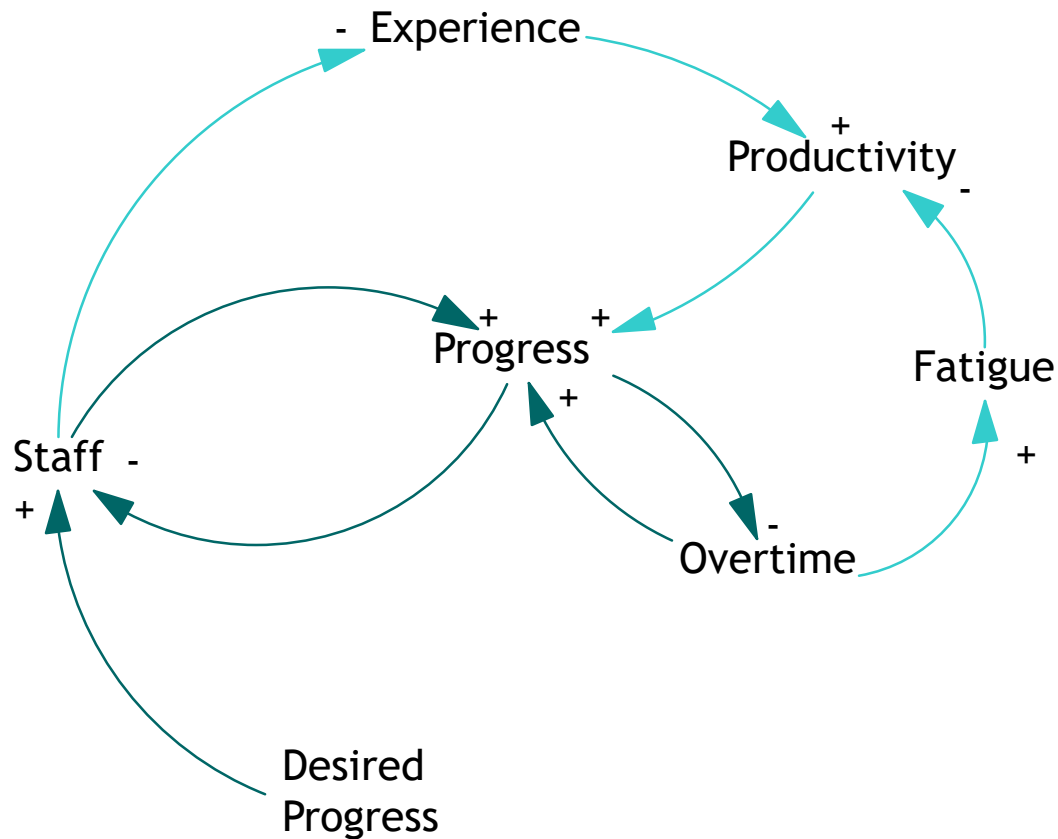

This also happens in PM...

The “dominant” loop on a project may be a **controlling loop**.

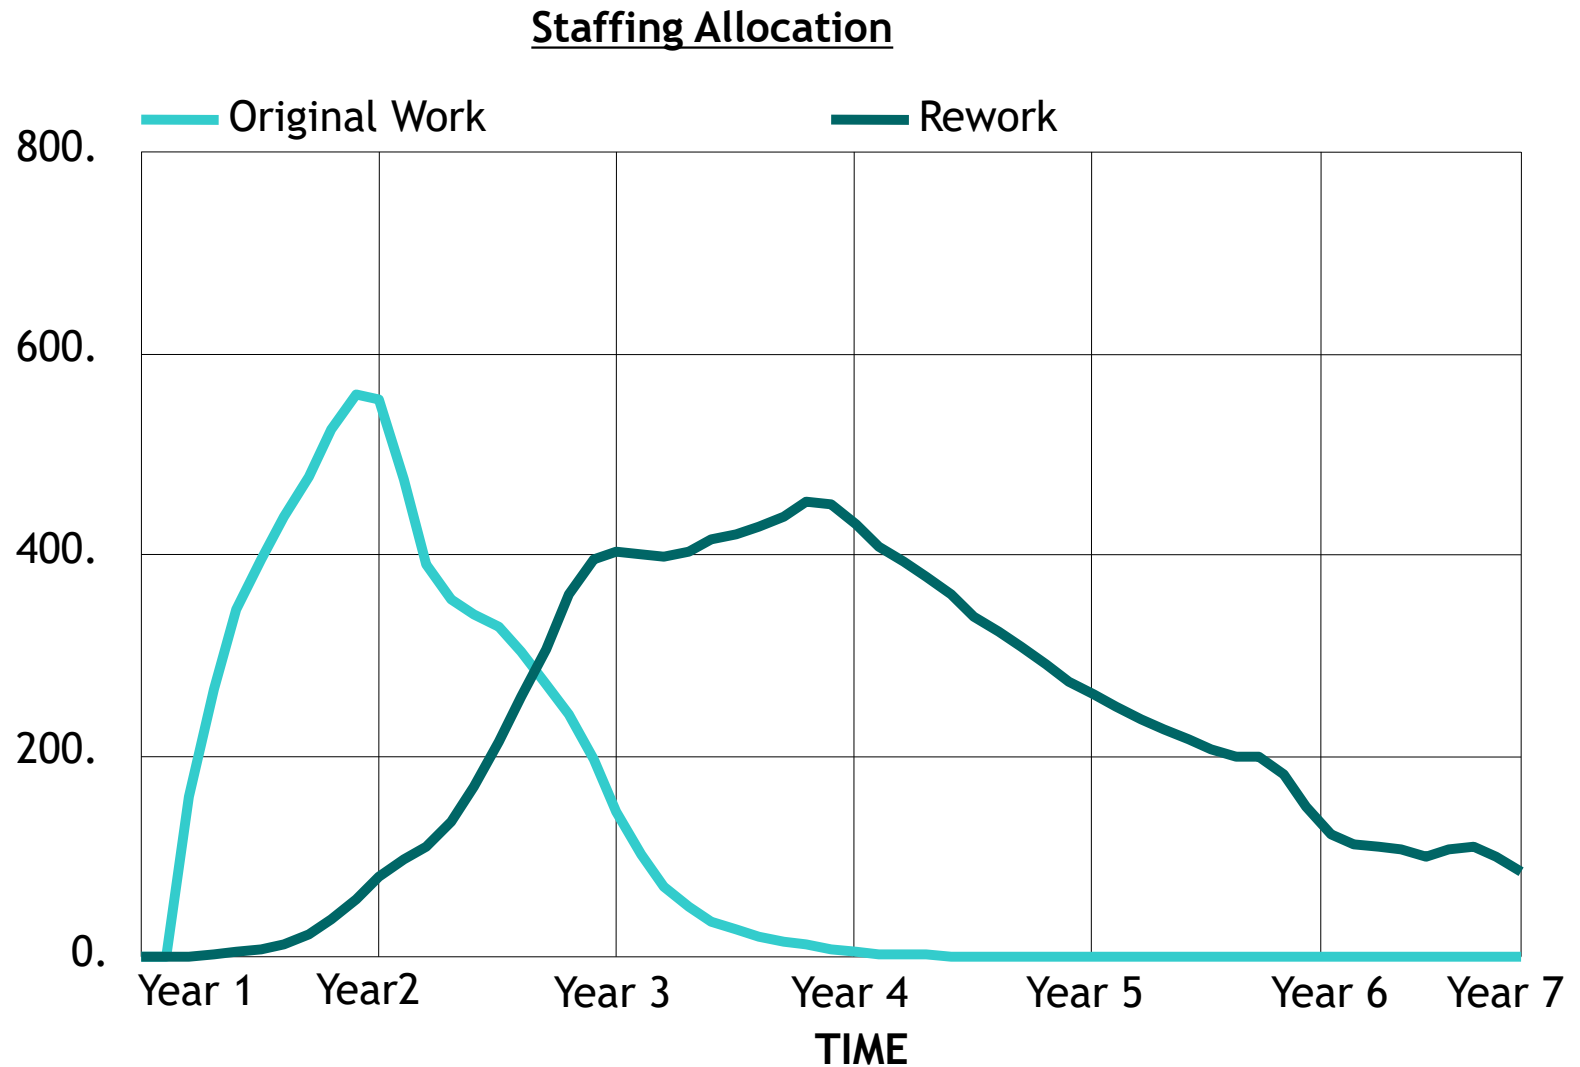

Reinforcing loops complicate that control...

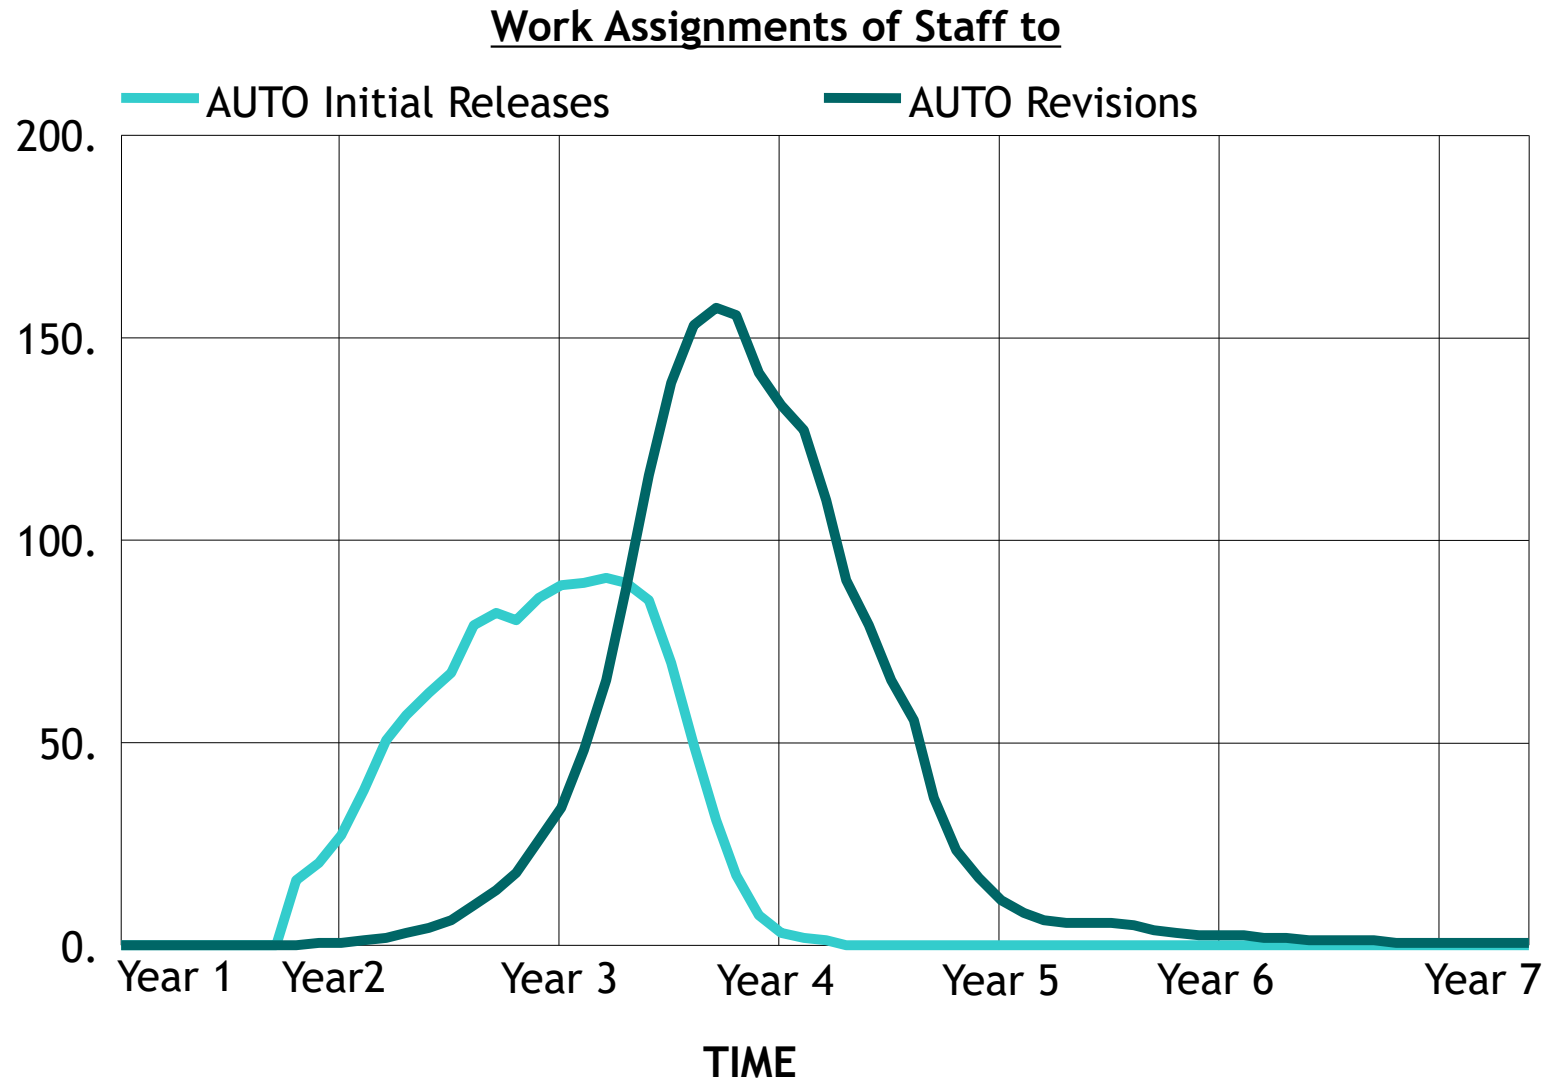

An Example on a Project

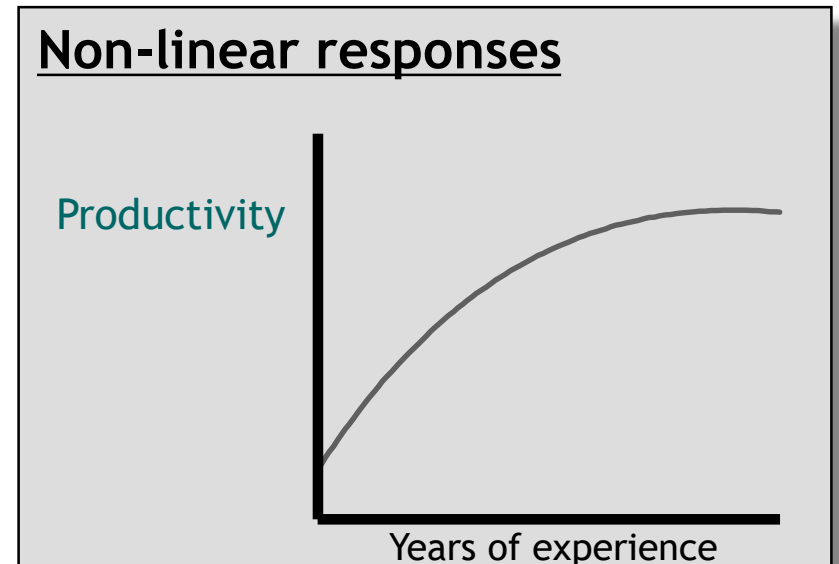

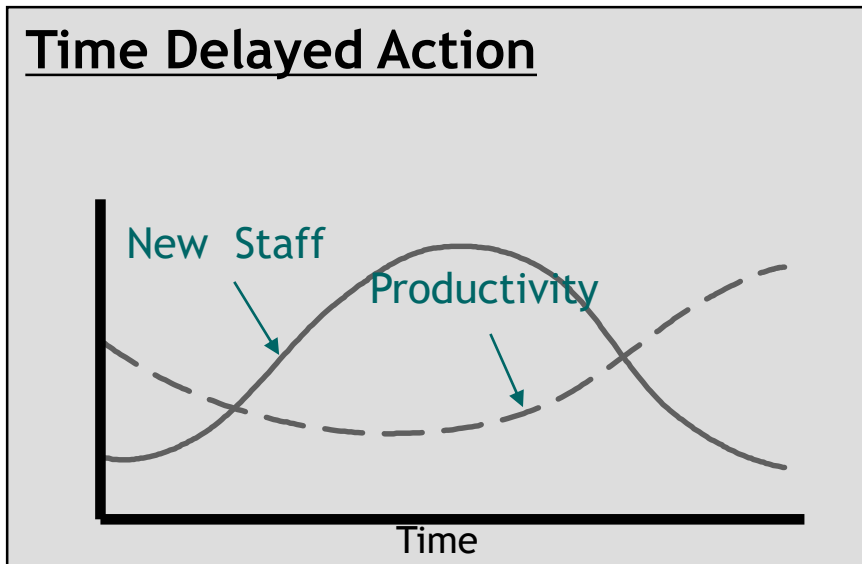

An extended tail caused by rework

A second staffing peak caused by rework

Main Elements within Feedback Loops

Generating observed modes of behaviors

“...Interacting positive and negative feedback loops of cause-effect relationships, with delays and non-linearities are capable of generating all observed modes of behavior...”

Simulating observed behaviors

Potential Benefits of Dynamic Approach

Systems thinking and dynamic modeling provide a new approach

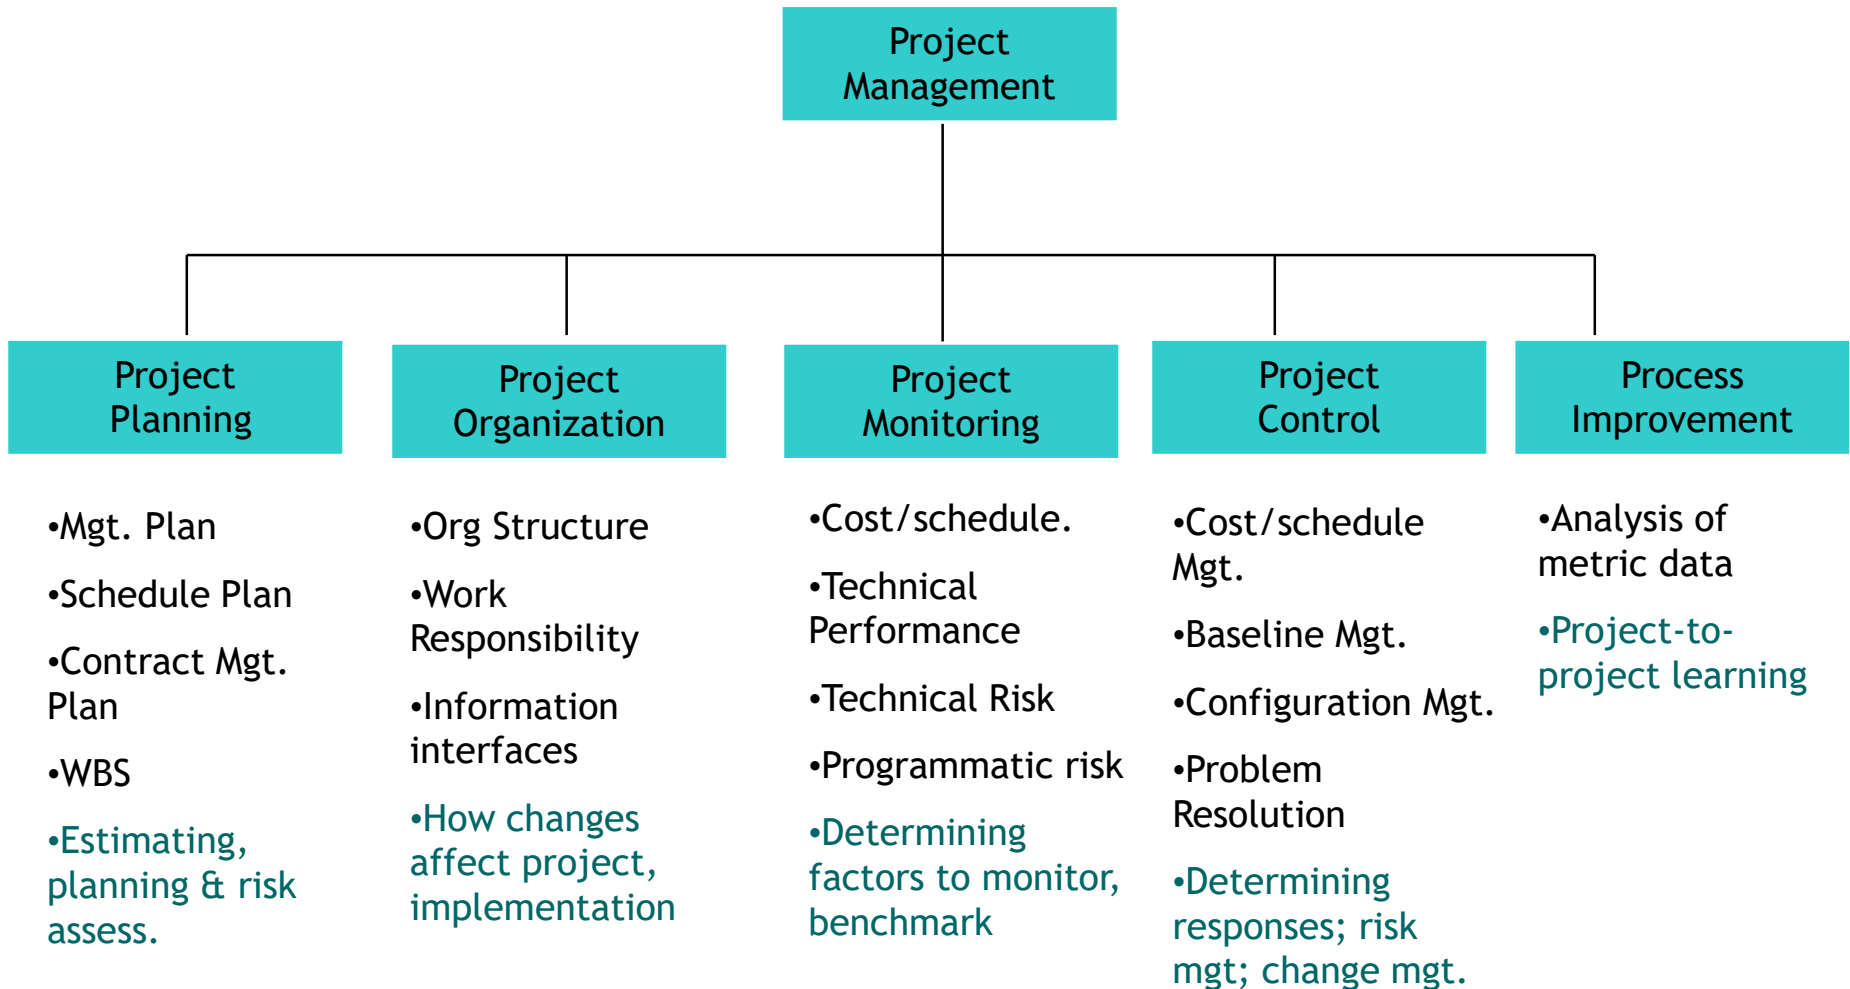

As a World View ...

- Focus on understanding behaviour over time
- Internal feedback and stock-flow structure creates that behaviour
- Integrative, high-level view of projects, business, competition, markets.
- Provides understanding of how the business dynamics work, and critical success factors

As a Process and Tools ...

- Engages management team in strategy dialogue
- Structured approach to analyzing and managing complex issues
- Facilitates communication of strategies, consensus-building, and commitment
- Basis for strategy management and organizational learning

Project Management Context

Already applied in many industries..

Aerospace/ Electronics

Missiles
Radars
Aircraft
Fire Control Systems
Guidance Systems
Satellites

Shipbuilding

Destroyers
Carriers
Submarines
Frigates
Commercial
Assault Ships

Major Construction

Cross-Channel
Tunnel
Nuclear Power
Plants

Large Developments

Air Defense / C³I
Telephone
Switching Systems
Shipboard Control
Systems
Vehicles
Power Trains

Lecture Outline

- ✓ Chronic Problems in Project Management
- ✓ Dynamic Management Approach
- ✓ Dynamic Management Concepts
- Course Administration

Grading

Continuous Assessment: 100% (NO Exam)

- Assignments: 40%
- Term Project: 30% (only final presentation to be assessed)
- Quizzes, attendance etc: 30%
- All assessed in House Points

Others

- Lecture materials will be posted in etl of SNU portal (<http://portal.snu.ac.kr>).
- Assignments (A1 to A4) and one term project (TP1 to TP3) will be done and assessed in a group of 2-3 students.
- Hard & soft copies (thru e-Class) of the assignments are to be submitted before lecture (* 50% deduction on marks will be applied to late submission).
- Modelling software, Vensim PLE is available at www.vensim.com

Lecturer

181 cm, 85kg

Full Prof.,

PhD from MIT

E-mail: mspark@snu.ac.kr
